DETAILED ACTION

Applicant's election of claims 60-89 in the reply filed on October 21, 2004 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claims 1-59 and 90-115 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim.

The examiner notes that upon further review of the case, it was found that the application contains claims directed to the following patentably distinct species.

Election/Restrictions

This application contains claims directed to the following patentably distinct species of the claimed invention:

A. Method of forming the dielectric layer.

A-1. An embodiment in which dielectric is formed by CVD. The examiner notes that claim 63 appears to read on this embodiment.

A-2. An embodiment in which dielectric is formed by sputtering. The examiner notes that claim 64 appears to read on this embodiment.

B. Top electrode material.

B-1. An embodiment in which the top electrode comprises a semiconductor. The examiner notes that claim 75 appears to read on this embodiment.

B-2. An embodiment in which the top electrode is comprised of metal. The examiner notes that claim 76 appears to read on this embodiment.

B-3. An embodiment in which the top electrode comprises a metal nitride. The examiner notes that claim 77 appears to read on this embodiment.

B-4. An embodiment in which the top electrode comprises a metal silicide. The examiner notes that claim 78 appears to read on this embodiment.

B-5. An embodiment in which the top electrode comprises a metal oxide. The examiner notes that claim 79 appears to read on this embodiment.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species from each group A and B above, for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claim 60 is generic.

For example if applicant elects A1 and B1, then the examiner believes claims 60-63, and 65-75, 80-89 are readable on the elected species.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims

Art Unit: 2812

readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
